

UGOLDX White Paper

The Utility and Growth Layer of the GDP Ecosystem

UGOLDX is a separate digital utility and community token designed to support platform participation, user engagement, commercial adoption, and ecosystem growth. Where UGOLD provides access to gold-linked digital value, UGOLDX is designed to connect users with platform functionality, membership benefits, fee programs, campaigns, partner services, and community participation.

UGOLDX does not represent physical gold, equity in GDP, dividends, or ownership of Company assets. Its role is to provide practical utility within supported products and services.

Designed for Active Participation

- Platform fee benefits
- Membership and eligibility tiers
- Priority access to selected services
- Wallet-based utility
- Community recognition
- Promotional campaigns
- Partner programs
- Educational and market-related features
- Card-related privileges where available
- Access to future ecosystem functionality

All features remain subject to final product terms, eligibility requirements, geography, regulatory analysis, and technical availability.

A Distinct Product with a Distinct Purpose

UGOLD	UGOLDX
Gold-linked digital instrument connected to gold value and physical utility	Digital utility and community token for access, participation, and platform

Utility Across a Growing Financial Ecosystem

UGOLDX is intended to provide practical reasons for users to participate in and remain connected to GDP-developed products.

Fee Utility

Eligible users may receive access to discounted, alternative, or preferential fee arrangements for selected wallet, transaction, conversion, payment, or platform services.

Membership and Access

UGOLDX may be used to establish eligibility for different participation levels, premium functionality, priority service, early access, educational resources, events, campaigns, and partner offers.

Wallet Integration

The non-custodial UGOLD/UGOLDX Wallet is intended to provide the primary interface for viewing and using UGOLDX features. Supported utility can be applied transparently based on wallet holdings, user eligibility, transaction activity, or other disclosed criteria.

Trading-Community Engagement

- Trading-oriented education
- Community programs
- Market information
- Campaign participation
- Exchange relationships
- Contributor recognition
- Referral and distribution initiatives
- Partner integrations

Card and Payment Ecosystem

Subject to the final structure and applicable law, UGOLDX may provide eligibility for card-related benefits such as priority issuance, service tiers, selected fee benefits, enhanced functionality, or promotional programs. UGOLDX utility may evolve as GDP introduces additional products, partners, and services.

Growth and Commercial Role

UGOLDX is designed to help transform product awareness into measurable ecosystem participation.

User Acquisition and Retention

Community initiatives and utility benefits can attract crypto-native users who may subsequently engage with GDP wallets, UGOLD, card products, payment functionality, and future financial services. Ongoing utility, access tiers, partner benefits, and community programs can provide users with practical reasons to continue using GDP-developed platforms.

Cross-Product Adoption

- The non-custodial wallet
- UGOLD
- Exchange functionality
- Payment services
- Card products
- Partner services
- Future GDP-developed products

Partner Ecosystem and Monetization

UGOLDX can support commercial relationships with exchanges, payment providers, merchants, digital communities, content providers, technology companies, and other ecosystem participants. Subject to applicable law and final commercial arrangements, UGOLDX may support monetization through permitted token distribution, platform activity, premium services, wallet engagement, partner programs, user-acquisition relationships, increased payment and transaction activity, and greater adoption of other GDP products.

GDP Capability Demonstrated

- Utility-token architecture
- Token economics
- Digital-community development
- Wallet-based eligibility systems
- Product-led user acquisition
- Cross-product integration
- Exchange and partner relationships
- Digital-platform monetization
